

CASE STUDY

WALTER E. WASHINGTON CONVENTION CENTER

Project Overview

Events DC selected PAX Services Group for roofing improvements across 96 roof sections at the Walter E. Washington Convention Center in Washington, D.C. The approximately 800,000-square-foot project required varied installation approaches.

Most areas received a roof recover system with new insulation, cover boards, and an 80-mil PVC membrane. The steep south barrel roof required specialized installation methods and crane operations. The mechanical roof required full removal to the concrete deck, followed by a new vapor barrier and insulation system. A single purchase order helped PAX secure favorable manufacturer pricing, coordinate logistics, and maintain consistent crews throughout construction.

The team completed the project on time and in compliance with Events DC's requirements, delivering roofing improvements across a large, complex facility.

Key Statistics

Services: Roof Replacement

Size: ±800,000 SF

Industry: Commercial

Location: Washington, D.C.

Contract Value: \$20,838,509

Contract Completion: 2025

Occupied Environment

Elevated Security & Safety

Strict Compliance Requirements

Multiple Complex Systems

Superior Project Management

On Time & On Budget
